

# Valvoline All-Fleet® Plus

## Commercial & Industrial

### Overview:

Valvoline All-Fleet Plus Engine Oils are formulated to provide optimum performance in diesel engines, operating under a wide variety of service conditions, including diesel engines that utilize diesel particulate filters (DPF) and cooled exhaust gas engines (EGR).

### Use:

Valvoline's All-Fleet Plus Engine Oils are recommended for use in turbocharged and naturally aspirated two and four cycle diesel engines. In addition, these motor oils provide excellent performance in local stop and go routes, on-and off-highway, farm, construction, and mining applications.

### Advantages:

- High-temperature piston deposit control.
- Foam protection.
- Soot dispersancy and oil-thickening control.
- Can be used in gasoline engines for the "Mixed fleet" operator.
- Oxidation inhibition and low-temperature sludge protection.
- Corrosion and rust inhibition.
- Valve train wear protection and TBN retention.

### How it Works

High-quality additive chemistry contains powerful ingredients (anti-wear agents, anti-oxidants) to help fight engine wear and maintain superior lubrication.

### Wear:

Engine wear can manifest itself in different ways. All-Fleet Plus has been engineered to provide outstanding protection against abrasive wear from soot, boundary wear from metal-metal contact, and corrosive wear from acids. In the harsh lubrication regions where the oil film breaks down, All-Fleet has you covered.
